Ticket Routing: Team Directory

Use this table to find the right team when a ticket needs to be assigned outside Tier-1. Each link opens that team's page with its roles and example tickets.

i If a ticket could fit more than one team, check the "When NOT to assign here" note on each page, or escalate to your shift lead for a routing decision.

Department	Handles
IT	Hardware, software, network, and systems issues beyond Tier-1 troubleshooting
Engineering	Product bugs and feature requests for the core software product
Finance	Billing, invoices, payments, and refunds
Legal & Compliance	Contracts, data privacy, regulatory, and legal disputes
HR	Employee relations, benefits, onboarding, and workplace matters
Info Security	Security incidents, account compromise, phishing, and breaches
Client Success (Sales & Marketing)	Account management, upsells/renewals, retention, and marketing/brand concerns
Facilities	Physical office space, equipment, building access, and safety

IT

The IT team owns internal technology infrastructure: hardware, software, networks, and system access. Assign here when a ticket needs backend system access, hands-on hardware work, or technical troubleshooting beyond what Tier-1 can resolve at the account/settings level.

Roles

- **IT Support Specialist (Tier 2)** — deeper troubleshooting on devices, accounts, and software
- **Systems Administrator** — manages servers, internal systems, and user provisioning
- **Network Engineer** — handles connectivity, VPN, and network infrastructure
- **Helpdesk Manager** — oversees escalations and prioritization

Example Tickets

Ticket	Why it goes to IT
Employee laptop won't boot after an OS update	Requires hands-on device troubleshooting
New hire can't connect to the company VPN	Needs network configuration/access provisioning
Shared printer or network drive is unreachable	Infrastructure/connectivity issue
Employee needs a software license installed	Requires admin-level software deployment
Password reset that requires backend directory access	Beyond Tier-1's self-service reset tools
Reported server or internal system outage	Infrastructure incident requiring systems admin response

When NOT to Assign Here

If the issue is with the customer-facing product itself (a bug or broken feature in the app), route to **Engineering** instead. If it involves a suspected security compromise, route to **Info Security**.

Engineering

The Engineering team builds and maintains the core product. Assign here for bugs, defects, and feature requests tied to the software product itself — as opposed to internal IT infrastructure.

Roles

- **Software Engineer** — fixes bugs and builds features
- **QA Engineer** — verifies and reproduces reported defects
- **Engineering Manager** — prioritizes and assigns work within the team
- **Product Manager** — triages feature requests against the product roadmap

Example Tickets

Ticket	Why it goes to Engineering
Dashboard chart displays incorrect totals	Product bug affecting data accuracy
Customer requests a CSV export option	New feature request for the product
App crashes on a specific mobile OS version	Software defect requiring a code fix
API endpoint returns a 500 error	Backend defect needing developer investigation
Data fails to sync between two product modules	Product-level integration bug

When NOT to Assign Here

If the problem is with an employee's own device, network, or internal tools, route to **IT** instead. General "how do I use this feature" questions should stay with Tier-1 or go to a Client Success/onboarding resource.

Finance

The Finance team manages billing, invoicing, payments, and refunds for both customers and internal purchasing. Assign here for anything involving money changing hands.

Roles

- **Billing Specialist** — handles invoice and subscription billing issues
- **Accounts Receivable** — manages incoming customer payments
- **Accounts Payable** — manages outgoing vendor payments
- **Financial Analyst** — reviews reporting and budget questions
- **Controller** — oversees financial policy and approvals

Example Tickets

Ticket	Why it goes to Finance
Customer disputes a charge on their invoice	Billing dispute requiring account/ledger review
Refund request after a subscription cancellation	Requires processing a refund transaction
Customer was billed twice for the same period	Duplicate charge needing correction
Vendor asking about an unpaid invoice	Accounts payable inquiry
Customer wants to update their payment method	Billing account maintenance

When NOT to Assign Here

If the dispute involves a contract term or a legal obligation rather than the transaction itself, route to **Legal & Compliance**. Payroll questions from employees go to **HR** (Finance may be looped in as needed).

Legal & Compliance

The Legal & Compliance team handles contracts, regulatory obligations, data privacy, and formal disputes. Assign here for anything with legal exposure or a compliance requirement.

Roles

- **Legal Counsel** — reviews contracts and legal risk
- **Compliance Officer** — ensures adherence to regulations (e.g. GDPR, CCPA, SOC 2)
- **Contracts Manager** — manages contract drafting and renewals
- **Data Privacy Officer** — handles data subject requests and privacy incidents

Example Tickets

Ticket	Why it goes to Legal & Compliance
Customer requests deletion of their personal data	Data subject request under privacy law (GDPR/CCPA)
Client wants to amend or renew a contract	Requires legal contract review
Subpoena or law enforcement request received	Formal legal process requiring counsel
Customer disputes Terms of Service enforcement	Legal interpretation of contractual terms
Vendor requests an NDA before a partnership discussion	Requires legal document drafting

When NOT to Assign Here

Suspected data breaches or hacking attempts should go to **Info Security** first; Legal will be looped in for regulatory notification if needed. Simple billing disputes without a contract dispute belong with **Finance**.

HR

The HR team supports employees across the employment lifecycle — benefits, onboarding, workplace conduct, and policy questions. Assign here for internal, employee-related matters (not customer tickets).

Roles

- **HR Generalist** — handles day-to-day employee questions and policy guidance
- **HR Business Partner** — supports specific departments on people matters
- **Benefits Administrator** — manages health, retirement, and other benefits
- **Recruiter** — manages hiring and candidate pipelines
- **People Ops** — manages onboarding/offboarding logistics

Example Tickets

Ticket	Why it goes to HR
Employee has a question about benefits enrollment	Benefits administration
Workplace conduct or harassment complaint	Requires formal HR investigation
New hire needs onboarding paperwork or equipment request routed	Onboarding process ownership
Employee reports a payroll discrepancy	HR coordinates with Finance/payroll systems
Question about leave of absence or PTO policy	HR policy interpretation

When NOT to Assign Here

This is for internal employee matters, not customer support. Employee device or account access issues go to **IT**.

Info Security

The Info Security (InfoSec) team protects company and customer data from threats. Assign here for anything involving a suspected compromise, breach, or security risk — these tickets are typically time-sensitive.

Roles

- **Security Analyst** — investigates reported incidents and alerts
- **Incident Response Engineer** — leads containment and remediation during active incidents
- **Security Engineer** — manages security tooling and vulnerability fixes
- **CISO** — owns security strategy and major incident decisions

Example Tickets

Ticket	Why it goes to Info Security
Employee reports a suspicious phishing email	Potential security threat requiring investigation
Customer account shows signs of unauthorized access	Possible account compromise
Report of a potential data breach	Requires immediate incident response
External researcher submits a vulnerability disclosure	Needs security team triage
Request to review the security of a new third-party vendor/tool	Vendor security assessment

When NOT to Assign Here

Routine password resets with no sign of compromise stay with Tier-1 or go to **IT**. Regulatory notification following a confirmed breach is coordinated with **Legal & Compliance**.

⚠ Suspected active incidents (ongoing unauthorized access, active phishing campaign, etc.) should be flagged as urgent when assigning.

Client Success (Sales & Marketing)

The Client Success team owns the customer relationship beyond day-to-day support — including Sales and Marketing functions. Assign here for account-level, commercial, or brand-related matters.

Roles

- **Customer Success Manager (CSM)** — owns the ongoing customer relationship and retention
- **Account Executive (Sales)** — handles new deals, upgrades, and contract negotiations
- **Marketing Specialist** — manages campaigns, brand, and communications
- **Retention Specialist** — works with at-risk or churning accounts

Example Tickets

Ticket	Why it goes to Client Success
Customer wants to upgrade their subscription plan	Sales/upsell opportunity
Enterprise client requests renewal negotiation	Contract/commercial discussion
Customer complains about a marketing email or promotion	Marketing/brand issue
Customer asks to participate in a case study or reference call	Marketing relationship request
Customer shows signs of dissatisfaction and possible churn	Retention/account management needed

When NOT to Assign Here

Contract legal terms and liability questions still go to **Legal & Compliance**. Billing-only issues (no commercial negotiation involved) go to **Finance**.

Facilities

The Facilities team manages the physical workspace — office equipment, building access, maintenance, and safety. Assign here for anything physical, not digital.

Roles

- **Facilities Coordinator** — manages day-to-day office requests
- **Office Manager** — oversees office operations and supplies
- **Maintenance Technician** — handles repairs and building upkeep
- **Security/Front Desk Staff** — manages building access and visitor logs

Example Tickets

Ticket	Why it goes to Facilities
Office chair, AC unit, or elevator is broken	Physical equipment/building repair
Employee's badge doesn't work for building entry	Physical access control
Request for a new desk setup or office supplies	Office logistics
Safety hazard reported in the office (e.g. spill, exposed wiring)	Workplace safety issue
Conference room booking or AV equipment isn't working	Physical meeting space/equipment

When NOT to Assign Here

Digital system access (badge system's software backend, network login) may need **IT** involvement as well. Building security incidents that involve a suspected crime should also involve law enforcement per company policy.
